TP03: Key Findings from the Power BI Dashboard

HIGGS dataset (sample) | Big Data Analytics | Master 2 IA & Data Science

---

Overview

1. Total Events is **about 2K** , average lepton pT is **0.63** , Avg m_bb Gap is 0.00 (no filter).
2. Pie chart: Low and High pT each hold **about 50%** of events.

Finding 1: lepton pT differs between groups

3. Median lepton pT is **1.56 (High) vs 0.62 (Low)** ; maximum is 6.76 vs 1.00.
4. This gap is built in by the definition (Low = pT below 1), not a discovery.

Finding 2: m_bb is the same in both groups

5. Median m_bb is **0.87 vs 0.88** and the 90th percentile is 1.62 vs 1.61.
6. In the line chart the High and Low lines **overlap** , so pT level does not explain m_bb.

Finding 3: data is concentrated

7. Combo chart: event counts are highest in the first m_bb bins and **drop quickly** .
8. Avg lepton pT stays flat (0.6 to 0.7); scatter bubbles cluster near 0.6 and 0.2.
